

Freelancer Systems Snapshot

A 10-15 minute self-audit to find one system leak, take one useful action, and choose the next tool only when you need it.

FREE LEAD MAGNET LM001 | EQORAUUA OPERATOR SERIES

1. Score your current system

For each statement, score 0 = not true, 1 = partly true, 2 = consistently true.

AREA	STATEMENT	0	1	2
Leads	I know where my next qualified leads will come from.	☐	☐	☐
Leads	I follow up without guessing what to say.	☐	☐	☐
Knowledge	My best messages, decisions, and lessons are easy to find again.	☐	☐	☐
Knowledge	I use one source of truth for active client work.	☐	☐	☐
Time	I do not rebuild the same document or prompt from zero each week.	☐	☐	☐
Time	I know which tasks should stay human and which can be assisted by AI.	☐	☐	☐
Repeatability	I have a clear process from lead to onboarding.	☐	☐	☐
Repeatability	My offer and project boundaries are clear before work begins.	☐	☐	☐

Total score: ____ / 16

2. Find your first bottleneck

Circle the area with the lowest score. Do not fix everything at once; choose the bottleneck that is blocking the next useful result.

LOWEST AREA	YOUR FIRST USEFUL RESULT	ONE NEXT STEP
Leads	Know where qualified leads come from and how to follow up.	P03 - Client Acquisition Kit
Knowledge	Find and reuse your best decisions, context, and working methods.	P01 - AI Systems Guide
Time	Stop rebuilding routine messages and prompt foundations.	P02 - Prompt Templates (coming next)
Repeatability or boundaries	Decide what is included before unpaid work quietly expands.	M001 Scope Change Kit - \$2.99

3. Choose one action this week

My bottleneck: _____

The smallest system I will build: _____

I will know it works when: _____

4. Your system grows in layers

You do not need every EQORAUUA product today. Start with the problem that costs you the most energy or money, then add the next layer when that first system is working.

M001 - protect project boundaries and turn one unclear request into a clear decision.

P03 - build a repeatable client path: lead, outreach, qualification, proposal, scope, and onboarding.

P01 - build reliable AI workflows around the work that now repeats.

P02 - add reusable prompt building blocks when released.

P04 - connect the complete operator system when the bundle is released.

Choose one next step, use it, then return to this map when the next bottleneck appears.
